Alex Polychroniadis

London, UK · Alexandros.polychroniadis@gmail.com · linkedin.com/in/alexpolychroniadis

I am an engineering student (IMEE, University of Bath, expected First) with a strong pull towards software. I have placement experience on live mission-critical systems, where I also built AI tooling to simplify testing. I co-founded **gocourt.gr**, a court-booking platform now in pilot with Athens clubs.

EXPERIENCE

Firstco — Placement Engineer

September 2025 – September 2026 · London (hybrid)

- Testing and system integration on a PLC/SCADA upgrade for Heathrow Airport's live mission-critical systems, coordinating with operations to minimise disruption
- Contributed to a Power Management System at Telehouse's data centres, creating risk mitigation and error handling diagrams for work on a live site
- Built a Python MCP server that lets LLM agents such as Claude create and update SpiraTest test cases via authenticated APIs, replacing manual UI entry

gocourt.gr — Co-Founder

June 2025 – Present · In Pilot Stage

- Co-building a court-booking platform for Athens padel/tennis, now in an owner pilot: an owner dashboard (bookings, dynamic pricing, staff roles, analytics) plus player booking
- Led the web app and owner dashboard, double-booking prevention (Postgres exclusion constraints, transactional slot holds), live booking sync over Socket.IO, security hardening and CI
- Built on Node/Express and PostgreSQL (Supabase), with a React web app and Capacitor iOS/Android apps sharing one codebase; ~120 automated tests run in GitHub Actions CI to guard every change, with deploys to Cloudflare Pages and Render
- Working directly with 5 tennis and padel clubs in Athens to understand how they run bookings, then design and ship features around their needs to bring them onto the platform

ELTRAK S.A. — Marine Sales Engineer Intern

Aug – Sep 2024 · Athens

- Worked with clients and engineering to turn requirements into technical proposals and priced offers for motors, generators and cranes using CAT and Palfinger tooling
- Supported engineering of a containerised 2 MW Caterpillar generator package for a 300 m container ship, working with drawings and project documents with a multi-discipline team

EDUCATION

University of Bath — Integrated Mechanical and Electrical Engineering (IMEE), BEng

October 2023 – June 2027 · Placement year 2025–26 · Expected grade: First

- **BEATRIX** — built a multi-sensor robot with MATLAB GUI and facial recognition. Integrated sensor streams into an operator-facing UI and iterated on a working end-to-end system
- **Autonomous Mouse Race** — built, debugged and raced an autonomous robot, getting its control and sensing to work on a physical track under real-world constraints

The Moraitis School — International Baccalaureate

2021 – 2023 · HL: Maths AA, Physics, English · SL: Computer Science, Business and Management, Modern Greek

F1 in Schools: Led a team of 10 that won the F1 in Schools competition in Greece and reached the 2022–23 World Finals in Singapore; ran CFD and FEA, and designed and 3D-printed the car (SolidWorks, Fusion 360)

SKILLS

Software: Java, C++, Python, JavaScript/Node.js, React, PostgreSQL, REST APIs, Git, GitHub Actions, Express, Socket.IO, FastMCP/httpx, ML, RL, Supabase, Render

AI & Agentic Systems: Cursor, Claude Code, MCP, LLM agents

Systems & embedded: PLC/SCADA, Arduino/embedded, MATLAB

Languages: English & French (full professional), Greek (native)
